

2024 KronoMoon observance — Mon 25 Mar 07:00 UTC — over a town near you.

Krononaut Moon

[Home](#) | [Krononaut Moon](#)

Welcome to the Krononaut Moon landing site

Krononaut Moon (or *KronoMoon*) is a one-night-of-the-year celebration of time, timelessness & time travel, taking place at various sites when the *Full Moon* shows up in closest proximity to the *March Equinox*.^[1] Traditionally, **KronoMoon** night is for welcoming *Visitors from the Futures* (or *Krononauts*). Documentation dates back to a gathering in downtown Baltimore, MD, under the Full Moon in March, 1982.^[2]

Andraszy

This upcoming spring, the **Krononaut Moon** will be full at 07:00 UTC on Monday, March 25, 2024, which is also a *Penumbral Lunar Eclipse*.^[3] Some moongazers will be watching the skies on Sunday night, March 24. Then in the following winter, 2025's **Krononaut Moon** will see a *Total Lunar Eclipse*^[3] at 07:00 UTC on Friday, March 14, 2025. See our *KronoMoon Calendar page* to begin making plans.

What is a Krononaut Moon?

- **Krononaut Moon (*Kro-no-naut Moon*) is community time travel research.**
It's next up on March 25, 2024. All are invited to participate wherever you are.
- **Krononaut Moon is a once-a-year pre-vernal (in the Northern Hemisphere) Full Moon.**
Usually in March, it's a Full Moon like September's *Harvest Moon* or January's *Wolf Moon*. **KronoMoon** night occurs within a few days of the *March Equinox*^[1], either before or after. When a holiday is tied to the Moon's orbit — ie, off the solar calendar grid — it is known as a "*moveable feast*". (Much more info can be found in these pages.)
- **Krononaut Moon is an open-community celebration.**
It could be *your* celebration — a night for lunomancers, moondancers, cosmologists, topologists, aspiring astronauts and Krononauts. Even cynical time travel deniers are welcome to observe the night's various orbitations. It's a night for embracing the ancient spirit of the Full Moon and contemplating one's own cosmos — by oneself, with one's past and future selves, or with friends, colleagues, or the family dog and cat. You might even meet a time traveler.
- **Krononaut Moon is a night and a lab for cosmic experimentation.**

Maryland in 2023

It's what we call *community time travel research* (or *Krononautics*). Citizen scientists, conceptual artists, rocketeers, drum circlers, quantum physicists, universities, community and theater groups are encouraged to develop projects around the **Krononaut Moon** in 2024, 2025, and the years beyond.^[4] The location is up to you and your collaborators. We'll calculate the time and you pick the place.

- *Krononaut Moon* is a night to Welcome Visitors from the Futures.

Listen to the Krononauts’ story.

The Last Archive is a podcast founded by historian Jill Lepore and distributed on *Pushkin.fm*. In S4.E6, writer Ben Naddaff-Hafrey examines contemporary notions of time travel, and features the project that would become **Krononaut Moon**.

Footnotes

1. **The March Equinox** occurs on March 20 in most years. It is more accurately described as the *Northward Equinox*, as the Sun crosses the equator in the northerly direction. In the *Northern Hemisphere* it marks the *Vernal Equinox*, and in the *Southern Hemisphere* it marks the *Autumnal Equinox*.

Around at this time, the Sun moves from the house of *Pisces* into the house of *Aries*. Similarly, when it is full, the Moon moves from *Libra* (March’s *Worm Moon*) into *Virgo* (April’s *Pink Moon*). During the Full Moon, the Sun and Moon are in opposite houses, with the Earth floating in between the two. **KronoMoon** night always occurs within a few days of the *Northward Equinox* — either before or after. It can shine at its brightest anytime between March 6 and April 3. Today it is easy to calculate the **Krononaut Moon** for dates far into the future(s).

2. In 1982, the Baltimore Krononauts’ gathering for *Visitors from the Futures* was covered in: *“The Night the Planets were Aligned with Baltimore Lunacy”*, *New York Times*, March 11, 1982. The reporter was one Benjamin Franklin (for real).

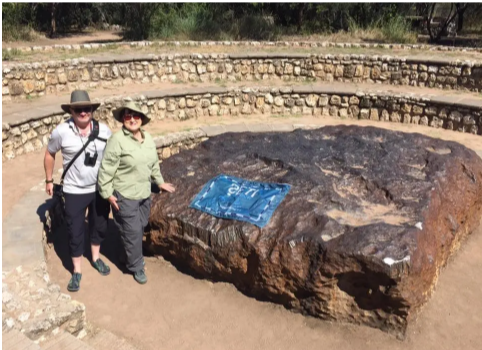

In 1978, the **Chrononautic Society**, which was an earlier iteration of **Krononaut Moon**, was written up in the *Leo-Aquarius* chapter of the best-selling astrology book: *Linda Goodman’s Love Signs*, 1978.

3. A **Lunar Eclipse** is when the Earth’s shadow darkens all or part of the moon. It can only happen on the Full Moon. There are different types, including the direct-hit *Total Lunar Eclipse* which will occur on **KronoMoon night** in March, 2025. A less distinct *Penumbral Lunar Eclipse* will occur on **KronoMoon night** in March, 2024.

4. For science, art, philosophy and community groups, March’s Full Moon (and occasionally April’s) is a program scheduling opportunity for you and your wildest dreams. Start off manageably with storytelling, a campfire, or a screening of Chris Marker’s *La Jetée* or Terry Gilliam’s *12 Monkeys*, or the double feature! Host a lecture on the astronomer **Hypatia** of ancient Alexandria, Egypt, or **Quantum Entanglement**, or **Buddhism** or the **Fluxus** movement. In 2024, events can be scheduled for **Sunday, March 24**. Next year, the **Krononaut Moon** in 2025 will put on an especially dramatic show with a *Total Lunar Eclipse*. Think about some of those possibilities. Your group can have its own discussion channel on our **Discord** server. Click on our **Contact** page.

5. Krononauts love *Mastodon social media*!

Note: Join in with your friends & colleagues on Monday night, March 25, or Sunday night, wherever you are. Please take many photos of the Full Moon and the Time Travelers to share on Mastodon and in the Fediverse. This website will be completely rebuilt in 2024 (for the *Krononaut Moon* and total lunar eclipse on Friday, March 14, 2025). Thank you.
